

CF-911 Automatic Counterfeit Detector

The CF-911 is a fully automatic self-feeding counterfeit detector which has been thoroughly tested by some of Australia's biggest cash handling venues with flawless results. It scans the IR, UV, MG, size, and density signatures of notes, and displays an error should a counterfeit be presented. This unit is ideal for checking counterfeit notes before they hit the till.

This device has a very small footprint and sits next to the till where notes of various currencies can be feed through for analysis and validation. Simple for the till operator to use, auto currency check, perfect for pubs, club, banks, jewellery, high end fashion, foreign exchange outlets, airport retail, hotels, retail, and security.
