

## CF-912 Automatic Counterfeit Detector

The CF-912 is a fully automatic self-feeding counterfeit detector that Australia's largest cash handling venues have thoroughly tested with flawless results. It scans the IR, UV, MG, size, and density signatures of notes, and displays an error message if it detects a counterfeit banknote. This unit is ideal for checking banknotes before they reach the till.

The CF-912 has a very small footprint so it can fit next to the till where various denominations can be feed through for analysis and validation. Simple for a till operator to use and perfect for fast food, retail, supermarkets, petrol stations, pubs, clubs, taxis, and banks.
