OPTIONAL CLEARANCE SOFTWARE

By utilising clearance software with the counting machine, it will enable the operator to export directly into your poker machine analysis/compliance program thus eliminating manual data entry. The software will simply take readings from the machine as you run each poker machine through, and then give you the ability to both print and export.

This will also allow you to image your TITO tickets to digitally save them on PC.

You will also have ongoing records of all past clearances including operator names.

The screenshot shows the Abacus Clearance Software interface. On the left, there's a table with columns for Machine No, Amount, Expected, Variance, and Tickets. Below it, a 'Machine Breakdown' table shows denominations and counts. On the right, a 'Total Clearance Breakdown' table shows the overall totals. A printed TITO ticket is shown on the right, with a barcode and the text 'CASH OUT TICKET \$420.99'.
